

## **Welcome to the Bioactive Store**

- the online store of Bioactive.

### **Bioactive Marine Phytoplankton Nannochloropsis Gaditana**

Bioactive is a British based company offering a superfood supplement that contains the purest of nutrients for the support human health and wellbeing. Hence, Bioactive only sells Marine Pytoplankton Nannochloropsis Gaditana that is guaranteed for its authenticity and for its high quality. We ensure that the marine phytoplankton we sell is DNA verified for purity and high nutritional content.

#### **Purest and Finest**

Bioactive Marine Phytoplankton is made into the purest and finest of powders from the marine microalgae Nannochloropsis Gaditana – a single cell species of microalgae – which is host to a unique balance of nutrients which is close to perfection. Bioactive utilises Closed Photo-Bioreactor techniques using DNA verified Nannochloropsis Gaditana starter cultures direct from the Science Laboratory and ultra-filtration methods with only optimally purified water, minerals and sunlight to cultivate its own marine phytoplankton of the highest and purest quality.

#### **Professional standards**

Bioactive adheres to the highest professional sanitation practices during cultivation and processing to ensure unwanted algae and microbes are never present in their product: harvested cells are frozen below -50°C; all freeze drying, to ensure the preservation of all nutrients in the algae, is performed under strictly controlled conditions; powder is vacuum-packed in sanitary stand-up pouches immediately after grinding and leakage is prevented by double seal. All Bioactive Marine Phytoplankton is grown within the European Union area and produced to EU HACCP and GMP standards.

#### **More on marine phytoplankton**

Bioactive recognises marine phytoplankton as a powerhouse of nutrients and the ease in which it can “feed” the human body without injecting the bulky waste items such as water, fibre and fat often gained from other land based or animal food, nor does it have to be broken down in the gut by digestive juices. Marine phytoplankton’s simple single-celled molecular structure enables it to be absorbed by human cells without entering the digestive system, hence each nano-sized particle of marine phytoplankton, so miniscule it is invisible to human eyes, nourishes with a formidable and potent boost of nutriment not found in other visible foodstuffs.

Hence, Bioactive Marine Phytoplankton Nannochloropsis Gaditana delivers a power punch of sheer energy without making your body work hard to process or eliminate waste or toxins.
